

Birds Seen at Hemlock Lake County Park

The following 112 species have been sighted at Hemlock Lake County Park. Most field trips to the park have occurred in May, some in summer, a few in fall, but very little data has been collected in winter. Because of these limitations, a normal checklist would be meaningless. Indicated after the species' name is the abbreviation of the season during which an observation was made. More data is needed, so please submit your sightings to the county coordinator (bcorie@windstream.net).

Sp = Spring (March - May); **Su** = Summer (June - July); **F** = Fall (August - November); **W** = Winter (December - February).
